FOR IMMEDIATE RELEASE

Responsive Respiratory Introduces Innovative DOT Compliant Vehicle Cylinder Restraints

St. Louis, Missouri – April 1, 2009 – Responsive Respiratory expands its offering with Vehicle Cylinder Restraints for DOT compliant cylinder transport.

Engineered with safety in mind, Responsive Respiratory's exclusive cylinder restraints secure oxygen cylinders in an upright position to eliminate shifting, rolling or ejecting in the event of sudden stops, accidents or roll-overs during delivery, as required by DOT regulations (DOT 49, CFR, CH1, 177.840). RRI's vehicle restraints are constructed of heavy-duty netting and easily secure to most manufacturer's racks with a quick "tug" of the strap.

"It comes down to safety," notes Tom Bannon, RRI President. "These vehicle cylinder restraints are precautionary measure and a necessity for anyone transporting cylinders. With our universal sizing system, it's easy to select the proper size and upgrade an existing rack rather than purchasing a new, expensive enclosed metal cage – the only other option available today. Dollars and cents-wise, it's an intuitive next step to outfit the truck and keep the driver safe."

The vehicle cylinder restraints are the latest addition in Responsive Respiratory's full line of cylinder transport and storage solutions including industrial, warehouse and home/office models.

About Responsive Respiratory - - Responsive Respiratory was founded in 2002 and is dedicated to providing consumers with high quality respiratory products for the home health care and hospital markets.
